ProcXCEL

Role description
As at 09 Nov 2026

Mandatory internship Software & AI (m/w/d)

Pflichtpraktikum | 3–5 months | Full-time, hybrid | Start Jan/Feb 2027 | Düsseldorf

> A mandatory internship usually means assisting and waiting until it is over. **We want to do it differently.**

What this is

ProcXcel runs the buying work between strategic projects and routine purchases — from a request to a signed supplier contract. Specialist systems create the capacity; experienced practitioners govern every commercial decision.

You build the platform that runs it.

What you will actually do

- You write code in the platform. It goes into the product, not into a drawer.
- You use AI the way you already do, and build workflows that save us hours every week.
- You connect our tools (HubSpot, email, LinkedIn) until they run together.
- You sit in the sessions where we decide, and you may disagree.
- After a few weeks you own an area of your own.

What you bring

- You study business informatics, engineering, computer science or something adjacent.
- You can code. We look at what you have built, not only at grades.
- AI tools are as natural to you as a spreadsheet is to everyone else, and you wire them into other applications.
- Your internship is a **Pflichtpraktikum** required by your study or examination regulations.
- You are available full-time, five days a week, in Düsseldorf. Home office by arrangement.
- You get on with it, even when nobody tells you how.

Terms

Type	Mandatory internship, required by study or examination regulations
Pay	Unpaid, as is usual for a mandatory internship. If your internship runs longer than your regulations require, we pay for the additional time.
Duration	3 to 5 months, matched to your regulations
Hours	Full-time, 5 days per week, hybrid by arrangement
Location	Düsseldorf
Start	January or February 2027
Contract	Written Praktikumsvertrag with learning objectives and a named supervisor
Afterwards	Possible paid Werkstudent role
Reference	Qualified Praktikumszeugnis on completion

What you get from us

Leadership beside you

We come from the industry and know what we are talking about. You get access to decisions, not just to tasks.

Something that lasts

What you build belongs to the foundation of ProcXcel. Later you can say you helped start it.

A perspective

If it fits on both sides, the internship can continue as a paid Werkstudent role.

Learning at speed

A real product, a modern AI setup, and people who show you how a company looks from the inside.

A real engineering setup

Modern tooling, AI-first workflows and code review from day one, not a sandbox project.

Honest feedback

You know every week where you stand, and you get a qualified reference at the end.

How to apply

Send your CV, a few lines about what you have built and why you want to be part of it, links or work samples — and the **extract from your study or examination regulations** showing the internship is mandatory.

jobs@procxcel.com

We read everything, reply personally, and come back within two weeks.
